Brown, Jennifer. A., Donald F. McAlpine, and Rosemary Curley. 2007. Northern Long-eared Bat, *Myotis septentrionalis* (Chiroptera: Vespertilionidae), on Prince Edward Island: first records of occurrence and over-wintering. Canadian Field-Naturalist 121(2): 208-209.

First occurrence of the Northern Long-eared Bat, *Myotis septentrionalis*, on Prince Edward Island is reported. A mixed-species hibernaculum of *M. septentrionalis* and the Little Brown Bat, *M. lucifugus*, is also described from southeastern Prince Edward Island. This is the first record of bats over-wintering in the province and the first time either species has been reported making use of a building as a hibernaculum.

Key Words: Little Brown Bat, *Myotis lucifugus*, Northern Long-eared Bat, *Myotis septentrionalis*, Prince Edward Island, distribution, hibernaculum.
